1 Introduction

This document lists the official Woodsmith Project Work Breakdown Structure (WBS) and is consistent across all facilities and locations for the Woodsmith Project.

Project number if in use is listed below:

PROJECT NUMBER		
Project Number	Project Title	Project Acronym
40	Woodsmith Project	WS

2 Location

Code	Location
ALL	All Areas
BRS	Bran Sands Berth or Quay
CPR	Construction Park and Ride
GEN	General non location specific items
LDX	Lady Cross
LWB	Lockwood Beck
MHF	Wilton Material Handling Facility (ISBL)
MTS	Mineral Transport System
OFF	Offsite (OSBL)
OLC	Overland Conveyor
OPR	Operations Park and Ride
PHF	Port Handling Facility
RBT	Redcar Bulk Terminal
TOL	Tockets Lythe
TPR	Teesside Process Facilities (MHF + WII)
TPT	Teesside Port Facilities (OLC + PHF + BRS + RBT)
WII	Wilton International (OSBL)
WSM	Woodsmith Mine

3 Facility

The Woodsmith Facilities have been broken down into a series of four-digit facility codes per the table below.

Only those Facility Codes with 'YES' marked in the 'TAGS' column shall be used in the allocation of tag numbers. This additional guidance has been included to ensure all items within a facility are consistently and unambiguously tagged using a single facility code, recognizing that certain codes are intended only for capture of indirect costs or for roll-up reporting.

For those facility codes used for tagging, the Level 1 (L1) and Level 2 (L2) codes represent facilities within a defined plant area / geographical location. The Level 3 (L3) and Level 4 (L4) codes represent a further grouping of the facilities under their respective L2 plant area by function and/or logical breakdown of the works.

The Woodsmith Project has its own bespoke Estimate Detail Codes (EDCs) which generally comply with the Worley standards, differing only because the codes were set up in advance of the harmonisation of coding between global estimating and Project Controls. The EDCs provide a uniform hierarchical coding structure which is used in the preparation of the Woodsmith Estimate and is used by Project Controls to map across to the project control code of accounts (COA). Further to the EDCs the project has developed a Knowledge Database (KDBs) with its unique coding. This coding links commodities, norms and rates and is designed for consistent application of rates and norms throughout the estimate. For a detailed list of KDBs refer to the Estimate Information Pack (EIP) template excel native file, refer document no. 0000-WOB-GN-TE-00011.
Noting, the KDB is a live document and will evolve throughout the preparation of the Estimate.
